OBJECTIVE

Motivated and dedicated Software Engineer with strong experience in full-stack development, AI systems, automation, and data-driven application design. Skilled in building scalable applications using modern frameworks and AI technologies including LLMs, RAG workflows, and automation tools. Passionate about solving real-world problems through engineering and intelligent systems.

SKILLS

Programming: C, C++, Java, Python, JavaScript (ES6+), TypeScript, SQL

Web: HTML5, CSS3, SCSS, Bootstrap 5, React, Next.js

Backend: FastAPI, Node.js, Firebase, REST APIs, GraphQL

Mobile: React Native

AI & ML: Generative AI, LLMs, RAG (Vectara), Agentic AI (LangChain, LangGraph, Crew.ai, n8n), OpenAI, Hugging Face, IBM WatsonX, Claude, Gemini

Browser Automation & Web Scraping: Playwright, Puppeteer, BeautifulSoup4, Selenium, Requests

Data Extraction: Regex, Selectors, XPath, JSON pipelines

Cloud/Deploy: Docker, Vercel, Streamlit, Hugging Face Spaces, Render

Databases: MongoDB, PostgreSQL, MySQL, Firestore

Version Control: Git, GitHub

Core CS: DSA, OOP, DBMS, OS, Networks

PROJECTS

AidLink AI | *React, FastAPI, PostgreSQL, LangChain, LangGraph, RAG, OpenAI API*

- Developed a government assistance and emergency reporting platform with AI-driven routing and automated responses.
- Added multilingual voice assistance and improved UI for accessibility.
- Integrated LangGraph agents for contextual reasoning and workflow automation.

ClimeAI | *FastAPI, React, LangGraph, Mistral AI, ElevenLabs*

- Built an AI-powered weather advisor providing recommendations, alerts, and personalized planning suggestions.
- Improved multi-agent collaboration and added voice-based conversational features.

AI Campus Admin Agent | *FastAPI, MongoDB, LangChain, GPT-4o, ElevenLabs*

- Built an automated campus assistant capable of answering queries, managing student data, and generating analytics.
- Integrated knowledge-based RAG system and authentication workflows.

Medical Scraping System | *Playwright, Python, BeautifulSoup4, Requests*

- Created automated scraping pipelines to extract structured healthcare data from dynamic websites.
- Used async Playwright automation and robust parsing for high extraction accuracy.

ACHIEVEMENTS

- Developed scalable scraping infrastructure used for multi-site medical data extraction.
- Built multiple production-ready AI projects including multi-agent systems and RAG applications.
- Contributed to mentoring communities and AI learning groups.

EDUCATION

The University of Agriculture, Faisalabad

Bachelor of Science in Software Engineering

2023 – 2027

CGPA: 3.5/4.0

VOLUNTEER EXPERIENCE

Pak Angels

2023 – Present

Instructor & Mentor

- Guided students in programming, Generative AI, and problem solving.

iCodeGuru

2023 – Present

Trainer & Moderator

- Conducted multiple free sessions on AI, DSA, and software engineering fundamentals.
